Notice to Readers

Though the guidelines and procedures contained in this text are based on consultations with healthcare professionals, they should not be considered absolute recommendations. The instructor and readers should follow employer, local, state, and federal guidelines concerning healthcare practices. These guidelines change, and it is each reader's responsibility to be aware of these changes and of the policies and procedures of their healthcare facility.

The publisher, author, editors, and reviewers cannot accept any responsibility for errors or omissions or for any consequences from application of the information in this book and make no warranty, express or implied, with respect to the contents of the book. The publisher does not warrant or guarantee any of the products described herein or perform any analysis in connection with any of the product information contained herein.

Gender Usage

This textbook uses gender pronouns interchangeably to denote healthcare team members and residents. The words *male* and *female* as used throughout relate to a person's sex assigned at birth. This may be different from their experienced gender.

Special Thanks

During the years of creating and revising this text, many reviewers and customers guided us. A sincere thanks to each of them and to those who helped us with this most recent edition:

Elizabeth Bunjer, BSN, RN, PHN Taunton, MN	Kelley H. Pattison, PhD, RN Kalamazoo, MI
Sally Christiansen, MS, BSN Dousman, WI	Ramesh C. Upadhyaya, DNP, MSN, MBA, APRN, CRRN, CCHP, FNP-BC Raleigh, NC
Connie W. DeFillippo, BSN, RN Cincinnati, OH	

We are very appreciative of the many sources who shared their informative images with us:

Contents

Page

1 The Medication Aide in Healthcare Settings

1. Describe the medication aide's role	1
2. Discuss professionalism and list examples of professional behavior	2
3. Discuss chain of command and scope of practice	4
4. Discuss communication, team building, and interpersonal relationships	5
5. Explain policy and procedure manuals	9

2 Ethical and Legal Issues

1. Describe legal and ethical behavior for medication aides	10
2. Discuss how state laws affect the role of medication aides	11
3. Explain tasks that cannot be delegated to medication aides	12
4. Discuss the medication aide's role in delegated tasks	13
5. Explain Residents' Rights and describe person-centered care	14
6. Discuss HIPAA, abuse and neglect, and other legal issues	15
7. Explain laws related to controlled substances	17

3 Medication Basics

1. Define <i>pharmacology</i> and related terms	18
2. Identify types of liquid medications	19
3. Identify types of solid and semisolid medications	19
4. Understand basic medication terminology and abbreviations	21
5. Identify common routes of medication administration	24
6. Discuss factors that may affect how the body uses medication	26

Learning Objective

Page

4 Medication Orders and Documentation

1. Describe the different ways medications can be ordered	29
2. List the elements of a complete medication order	30
3. Explain documentation of medication administration	31
4. Explain the controlled substances medication log	34
5. Describe how to observe and report accurately	36
6. Discuss how to resolve questions about medication orders	37

5 Medication Dosage

1. Discuss medication dose conversion	39
2. Explain the most common measurement systems for medication dosing	39
3. Explain dosage range	41

6 Medication Side Effects, Reactions, and Interactions

1. Discuss medication side effects	43
2. Discuss adverse reactions to medications	44
3. Explain drug tolerance	45
4. Describe drug interactions	46

7 Medication Safety

1. Explain the "rights" of medication administration	49
2. Identify information needed about the resident and the medication prior to administration	51
3. Explain medication contraindications	52
4. Discuss safe medication storage	53
5. Describe safe medication disposal	54

<i>Learning Objective</i>	<i>Page</i>
---------------------------	-------------

8 Preparation and Administration of Medication

1. Describe systems for packaging and distributing medications	55
2. Discuss how to prevent infection while administering medications	57
3. Discuss special considerations when administering medications	57
4. List steps to follow and safety checks to perform when setting up medications	59
5. Discuss procedures for medication administration by route	62
6. Review documentation of medication administration	78

9 Preventing and Responding to Medication Errors

1. Identify common causes of medication errors	80
2. Explain steps to follow when a medication error occurs	82
3. Discuss organizations involved with preventing medication errors	83

10 The Integumentary System and Common Medications

1. Describe the integumentary system	85
2. Discuss common medications used to treat wounds and skin infections	85
3. Discuss common medications used to treat dermatitis and psoriasis	87
4. Discuss common medications used to treat fungal infections, pediculosis, and scabies	88
5. Describe burns and sunburn and response to these conditions	90

11 The Musculoskeletal System and Common Medications

1. Describe the musculoskeletal system	93
2. Discuss common medications used to treat arthritis and gout	93

<i>Learning Objective</i>	<i>Page</i>
---------------------------	-------------

3. Describe common medications used to treat osteoporosis, osteomyelitis, and back pain	95
4. Discuss common medications used to treat strains, sprains, and fractures	96

12 The Nervous System and Common Medications

1. Describe the nervous system	101
2. Discuss common medications used to treat cerebrovascular accident (CVA) and epilepsy	102
3. Discuss common medications used to treat multiple sclerosis, myasthenia gravis, Parkinson disease, and Alzheimer disease	104
4. Discuss common medications used to treat pain and fatigue	105
5. Discuss common medications used to treat mental health disorders	106
6. Discuss common medications used to treat conditions of the sense organs	109

13 The Circulatory System and Common Medications

1. Describe the circulatory system	118
2. Discuss common medications used to treat hypertension	118
3. Discuss common medications used to treat coronary artery disease and related conditions	120
4. Discuss common medications used to treat heart failure and dysrhythmia	123
5. Discuss common medications used to treat conditions related to the blood	124

14 The Respiratory System and Common Medications

1. Describe the respiratory system	134
2. Discuss common medications used to treat rhinitis, sinusitis, and asthma	134
3. Discuss common medications used to treat influenza, COVID-19, bronchitis, and pneumonia	136

<i>Learning Objective</i>	<i>Page</i>
---------------------------	-------------

4. Discuss common medications used to treat chronic obstructive pulmonary disease (COPD)	137
5. Discuss common medications used to treat pleurisy, atelectasis, and pulmonary embolism (PE)	138
6. Discuss common medications used to treat tuberculosis (TB)	139

15 The Urinary System and Common Medications

1. Describe the urinary system	145
2. Discuss common medications used to treat urinary incontinence	145
3. Discuss common medications used to treat urinary retention and urinary obstruction	146
4. Discuss common medications used to treat urinary tract infection (UTI)	147
5. Discuss common medications used to treat kidney disease and fluid imbalance	148

16 The Gastrointestinal System and Common Medications

1. Describe the gastrointestinal system	151
2. Discuss common medications used to treat stomatitis and ulcerative gingivitis	151
3. Discuss common medications used to treat gastroesophageal reflux disease (GERD), peptic ulcer disease, and gastritis	153
4. Discuss common medications used to treat nausea, vomiting, diarrhea, and gastroenteritis	154
5. Discuss common medications used to treat constipation and hemorrhoids	155
6. Discuss common medications used to treat conditions affecting the bowels	156
7. Discuss common medications used to treat conditions affecting the liver, gallbladder, and pancreas	157

<i>Learning Objective</i>	<i>Page</i>
---------------------------	-------------

17 The Endocrine System and Common Medications

1. Describe the endocrine system	166
2. Discuss common medications used to treat diabetes	166
3. Discuss common medications used to treat thyroid disorders	168

18 The Reproductive System and Common Medications

1. Describe the reproductive system	172
2. Discuss common medications used to treat conditions of the male reproductive system	173
3. Discuss common medications used to treat conditions of the female reproductive system	174
4. Discuss common medications used to treat sexually transmitted infections	174

19 The Immune and Lymphatic Systems and Common Medications

1. Describe the immune and lymphatic systems	178
2. Discuss common medications used to treat HIV/AIDS	178
3. Describe common treatments for cancer	180
4. Discuss common medications used to treat rheumatoid arthritis, lupus, and shingles	181

Appendix – Antibiotics 187

Appendix – ISMP List of Error-Prone Abbreviations, Symbols, and Dose Designations 190

Glossary 198

Index 208

Procedures

Administering oral medications	64
Administering buccal and sublingual medications	65
Administering medications by metered dose inhaler	67
Administering nasal medications	69
Administering ophthalmic (eye) medications	70
Administering otic (ear) medications	72
Administering topical medications	73
Administering warm soaks with additive	74
Administering transdermal (patch) medications	75
Administering a rectal suppository	76
Administering medications by the vaginal route	77

Understanding how this book is organized and what its special features are will help you make the most of this resource!

1. List examples of legal and ethical behavior

Everything in this book, the student workbook, and the instructor's teaching material is organized around **learning objectives**. A learning objective (LO) is a very specific piece of knowledge or a very specific skill. After reading the text, you will know you have mastered the material if you can do what the learning objective says.

pharmacology

Bold key terms are located throughout the text, followed by their definitions. They are also listed in the glossary at the back of this book.

Administering oral medications

All **care procedures** are highlighted by the same black bar for easy recognition.

Guidelines: Stroke/CVA

Guidelines help students understand what medication aides need to know about procedures and conditions.

Safety First

There are many points at which medication names are used before a drug is administered in handwriting.

Accurate medication administration is an important part of promoting safety. Throughout this textbook, you'll see these **gray boxes** that describe how to promote safety with medications.

Beginning and ending steps in care procedures

For most care procedures, these steps should be performed. Understanding why they are important will help you remember to perform each step every time care is provided.

Beginning Steps

**Identify yourself by name.
Identify the resident according
to facility policy.**

Upon entering the resident's room, identify yourself and state your title. Residents have the right to know who is providing their care. Identify and greet the resident. This shows courtesy and respect. It also establishes correct identification. This prevents care from being performed on the wrong person.

Wash your hands.

Handwashing provides for infection prevention. Nothing fights infection like performing consistent, proper hand hygiene. Handwashing may need to be done more than once during a procedure. Practice Standard Precautions with every resident.

**Explain the procedure to the
resident. Speak clearly, slowly,
and directly. Maintain face-to-face
contact whenever possible.**

Residents have a legal right to know exactly what care you will provide. It promotes understanding, cooperation, and independence. Residents are able to do more for themselves if they know what needs to happen.

**Provide for the resident's privacy
with a curtain, screen, or door.**

Doing this maintains residents' right to privacy and dignity. Providing for privacy is not simply a courtesy; it is a legal right.

Ending Steps

Make the resident comfortable. Remove privacy measures.	Make sure sheets are wrinkle-free and lie flat under the resident's body. This helps prevent pressure injuries. Replace bedding and pillows. Check that the resident's body is in proper alignment. This promotes comfort and health after you leave the room. Remove extra privacy measures added during the procedure. This includes anything you may have draped over and around the resident, as well as privacy screens.
Wash your hands.	Handwashing is the most important thing you can do to prevent the spread of infection.
Place the call light within the resident's reach.	A call light allows the resident to communicate with staff as necessary. It must always be left within the resident's reach.
Report any changes in the resident to the nurse.	Every time you provide care, observe the resident's physical and mental capabilities, as well as the condition of the resident's body.
Document administration of the medication(s) on the resident's MAR using facility guidelines.	After you have finished administering medication, document on the resident's medication administration record (MAR) using facility guidelines. Do not record any medication before it is given. If you do not document the medication you administered, legally it did not happen.
